EL SALVADOR · CAFTA-DR GATEWAY · SINCE 2026

BUILT FOR *the Americas*

Wire harness and cable assembly manufacturing, engineered in El Salvador. Utility-grade quality. Duty-free US access under CAFTA-DR.

OUR MISSION

Manufacturing at the speed of the Americas.

Altus Energy exists to deliver utility-grade wire harnesses and cable assemblies from a single location — positioned to serve North, Central, and South American customers under the CAFTA-DR trade agreement.

Seven integrated production capabilities. One facility. Zero compromise. From raw materials to finished, tested assemblies —

delivered with the speed, quality, and tariff advantage that define modern supply chain partners.

WHAT WE BUILD

Seven Capabilities. *One Facility.*

01

Wire Processing

Automated cut, strip, and crimp on BOZWANG and equivalent high-speed machines. Precision lengths for complex multi-conductor assemblies.

02

Injection Molding

Twelve molding cells producing overmolded connectors, terminations, and environmental seals for utility and industrial assemblies.

03

Crimping

Reel-fed automated crimpers, PENNTEC pneumatic presses, and

04

Assembly

Schleuniger ultrasonic welding, JCWelec connectors, and precision

enclosed auto cells for consistent, validated crimp integrity.

gland-and-torque stations — assembled to engineering specs.

05

Auto Lines

Coiling, jumper production, and rotary indexing lines for high-volume assemblies requiring consistent takt time.

06

Quality Control

Dedicated QC with stop-line authority. Continuity, hi-pot, and pull-test validation on every assembly. Full drawing traceability.

07

Disconnect Boxes & Final Assembly

Scalable assembly benches where pre-crimped, pre-molded components are integrated into finished disconnect boxes, labeled, tested, and packaged — starting at four benches, scaling to eight.

QUALITY

Quality is not a *department.* It is a discipline.

Every shift runs with a dedicated QC inspector who holds explicit authority to stop the production line for defects or specification deviations. Our ultrasonic welding operators are dedicated, non-rotating specialists. Our Manufacturing Engineers are experts in mold changes, PLC troubleshooting, and preventive maintenance. This is how we deliver harnesses that perform in the field.

WHO WE SERVE

Built for *demanding industries.*

01

Utilities & Energy

Grid infrastructure, substation wiring, distribution transformer leads, and disconnect boxes for customers requiring reliability under extreme conditions.

02

Renewables

Solar combiner harnesses, BESS wiring, inverter connections, and tracker motor assemblies for utility-scale renewable projects.

03

Industrial OEM

Custom harnesses for industrial equipment — motor controls, sensor networks, HMI panels, and control cabinet assemblies to customer drawing.

04

Transportation & Fleet

Commercial vehicle lighting harnesses, fleet telematics wiring, and heavy-duty connectors for road, rail, and off-highway applications.

05

Infrastructure

06

Custom & Contract

Building power distribution, data center cabling, emergency lighting, and specialty industrial lighting assemblies.

Contract manufacturing for OEMs, EMS providers, and specialty integrators who need a reliable, quality-driven, cost-competitive partner.

STRATEGIC ADVANTAGE

Your gateway to *duty-free US access.*

Under the Dominican Republic–Central America–United States Free Trade Agreement (**CAFTA-DR**), wire harnesses and cable assemblies manufactured in El Salvador enter the United States **duty-free** under HTS classification 8544 — provided the tariff shift rule is met.

Altus Energy's sourcing and manufacturing strategy is designed to qualify: raw materials from CAFTA-DR and NAFTA-origin suppliers, with substantial transformation performed in El Salvador. The result is a supply chain that is both cost-competitive and tariff-free into the largest consumer market in the Americas.
